## **NEC Unified Solutions, Inc. announces release of the DS Cordless Telephone for the DS1000/2000**

NEC Unified Solutions is pleased to announce the immediate availability of the BDS Cordless Telephone (part number 80683) for use with either the DS1000 or DS2000 system. At a dealer List Price of only \$279.00, the 80683 connects to a BDS digital station port and acts just like a key phone.

The BDS Cordless Phone is a 900 MHz digital narrow band FM cordless telephone. It includes 4 fully programmable function keys with LED's, and has an easy-to-read 2 line, 16 character LCD display screen which includes four status icons. The status icons show

**In use/Idle  
Ringer On/Ringer Off  
Battery charge level  
Voice mail/Message Waiting**

Each cordless phone also has 4 dedicated feature keys which are used for 1) Hold, 2) Conference, 3) Transfer and 4) Redial. Power for the BDS cordless is provided by a rechargeable Nickel Metal Hydride Battery Pack.

To make it easy to control volume, the BDS Cordless has a single volume control that can be used to raise or lower both ring volume and handset receiving volume. The BDS Cordless also has a mute key which can either mute the handset microphone (while on a call) or turn off the ringer (while idle).

No more hunting for that person who's always away from their desk. If they have a BDS Cordless you can just transfer a call to their extension, and they'll get it. The easiest way to set this up is to have one of the 4 programmable cordless keys be a Call Coverage key with either immediate or delayed ring for that individual's desk extension.

The BDS Cordless phone can be part of a system that uses all available 30 channels. The maximum range is up to 350 feet under ideal conditions. However, radio transmission and reception can vary widely depending upon many different variables. Some of these variables include interior wall materials, foil-backed insulation or EMI emitting devices such as computers, fluorescent lights, etc.

Like all of the newer wireless devices the BDS Cordless Telephone includes a ring setting in which audible ring tones are replaced with vibration of the instrument itself.

***Thank you for your continued support of NEC Unified Solutions' products!***
