NEC Unified Solutions, Inc. announces release of UltraMail Voice Mail Cards for the DS2000

NEC Unified Solutions is pleased to announce the availability of the UltraMail and UltraMail 2000 “in skin” voice mail systems for the DS2000 system on May 1, 2004. The UltraMail family of products consists of two distinct models. The UltraMail is a flash based system that is available as a two (2) or four (4) port model. The UltraMail 2000 is a four (4) port hard drive based system. Either system can grow to a maximum of eight ports with the addition of a daughter board.

UltraMail is ideal for applications which require the **Directory Dial** feature (also known as **Dial by Name**). This feature is invaluable in assisting callers in dialing directly to the person they seek. UltraMail also includes **Park and Page** to help locate people, minimize “Hold” time and thus maximize line usage. UltraMail mailboxes come standard with **Multiple Greetings (3)** to facilitate changing between “out of the office” or “at lunch” greetings.

In addition, the UltraMail system includes cascading **Remote Message Notification** to make sure important messages get delivered. Another popular feature included in UltraMail is **Distribution Lists**. This lets a user send a single message to multiple users at the same time - an ideal way to quickly disseminate important information.

As an aid to phone users new to voice mail systems or to the UltraMail in particular, the UltraMail includes a **First Time Tutorial** explaining feature operation. Though the UltraMail card installs inside a DS2000 cabinet and may be inserted in any card slot except slot 1, it is important to remember that it does not require any analog ports for the voice mail interface.

Part numbers for the UltraMail and UltraMail 2000 are listed below:

<u>Part Number</u>	<u>Description</u>
17712	UltraMail Flash 2 port 3 hour voice mail system
17714	UltraMail Flash 4 port 3 hour voice mail system
17744	UltraMail 2000 Hard Drive 4 port, 130 hour voice mail system
0891045	UltraMail Flash 4 Port Daughter Bd. Used with 17712 or 17714 above
0891034	UltraMail 2000 4 Port Daughter Bd. Used with 17744 above
0891044	UltraMail 2 to 4 Port upgrade Used with 17712 above
17710BRO01	UltraMail Data Sheet (Pkg. of 25)

Please note that CPU 80025B and System Software 03.xx.xx or higher are required when installing an UltraMail Voice Mail system in a DS2000. Although the UltraMail has a large number of features which have proven to be most desirable to customers, it does not include the flexibility of "soft" keys to access those features.

We are sure the UltraMail will prove to be a valuable addition to your portfolio of Voice Mail offerings.
