Title: DS2000 - New 80005B Power Supply Available

NEC America is pleased to announce the availability of the 80005B DS2000 Power Supply. The 5B offers advance current sharing capabilities not present in the previous 5A model. The current sharing capability of the new 5B is very accurate even at low current levels. This will help extend the life of Power Supplies in operation.

80005B Power Supplies are currently shipping in all DS2000 kits ordered from NEC America, but kits in stock in different Supply Houses may still contain 5A Power Supplies.

- C - A - U - T - I - O - N -

It is very important to keep in mind that all Power Supplies in a DS2000 8 Slot system **MUST BE THE SAME TYPE**. Do not mix 5A and 5B Power Supplies in the same system.

If Power Supplies are mixed in the same system, one Power Supply will attempt to become dominant; overheat and eventually fail.

To ensure proper Power Supply operation and normal operating life span, make sure that Power Supplies in a DS2000 8 Slot system are either all 80005A's or all 80005B's.
