**Title:** Circular Hunting Setup with DS1000/2000

---

When setting up Circular Hunting in the DS1000/2000, do not program the last extension in the group to hunt back to the first. Instead, program the last extension to hunt to the second extension in the group. For example:

302 -> 303 -> 304 -> 305 -> 302

Hunting will not proceed past extension 305. If the call is unanswered at 305, it will route to its normal overflow destination (i.e., Key Ring).

302 -> 303 -> 304 -> 305 -> 303

Hunting will circulate normally, excluding extension 302.
